POLYGLASS® BASE

PRODUCT DESCRIPTION
Polyglass Base is an APP modified bitumen roofing membrane base sheet, reinforced with a fiberglass mat, saturated and coated with a polymerized asphaltic compound with exceptional waterproofing and weatherability.

Polyglass Base is specially designed for use as a base ply or interply layer in mechanically attached or heat-welded applications. Polyglass Base can also be used as a base sheet for Self-Adhered systems.

The top and bottom surfaces of the Polyglass Base are finished with poly film.

USES
• Mechanically fastened or heat welded base or interply sheet.
• Base sheet for Self-Adhered systems.
• New roofing, re-roofing and flashing detail.

FEATURES AND BENEFITS
• Proprietary APP compound weathering surface.
• Fiberglass reinforced; puncture and tear resistant.
• Superior flexibility and dimensional stability.

PRODUCT DATA
Coverage (Nominal) ………………… 200 sq ft
Weight (Approx) ……………………… 86 lbs
Roll Size ……….. 65’ 8” x 39 3/8” (20m x 1m)
Rolls/Pallet……………………………20

APPLICABLE STANDARDS
• ASTM D 6509 Type I
• UL Classified for use in class A, B or C roofs, as listed the latest UL “Roofing Materials and Systems Directory”
• TDI

PRODUCT WARRANTY
Polyglass USA, Inc. commercial roofing membranes can be backed with a manufacturer’s warranty for up to 20 years when used as part of an approved, multi-ply roofing system. Please see your Polyglass USA, Inc. Sales or Technical Representative for specifications and details.

APPLICATION INSTRUCTIONS
• Appl one or more layers directly over an acceptable substrate.
• Polyglass Base membranes shall be set with min. 3” side and min. 6” end laps.
• The rolled membranes shall be set and unrolled approximately 6’ to align sheets.
• A propane torch flame shall be applied to the exposed, outer surface of the roll (the membrane underside) until the surface reaches the proper application temperature.
• The roll is then gradually unrolled to create a continuous heat weld between the membrane and substrate.
• The remainder of the roll is re-rolled and installed in the same manner.
• There should be approx. 1/4” to 3/8” bleed out of the melted membrane (compound) at the laps.
• Polyglass Base sheets may be applied as a mechanically attached base sheet.
