

ELASTOFLEX® SA P

PRODUCT DESCRIPTION

Elastoflex SA P membranes are premium, self-adhered elastomeric roofing products, manufactured using patented ADESO® Dual-Compound Self-Adhesive technology, whereby a “true” SBS polymer modified asphalt compound is applied on the top layer and an aggressive self-adhesive compound is applied on the bottom layer. Elastoflex SA P membranes are built with a high performance reinforced polyester mat to guarantee excellent dimensional stability.

Elastoflex SA P membranes are finished with granules on the top surface and feature patented FASTlap® for granule free roll ends, as well as SEALlap®, a factory applied adhesive treatment at the membrane overlap. Each of these patented features provide for greater ease of application as well as improved product performance.

USES

- Designed for applications where using a propane torch is undesirable or prohibited
- Applications include new construction, re-roofing and BUR repair installation
- As a flashing membrane in all applicable specifications

FEATURES AND BENEFITS

- Excellent long-term adhesion and application to multiple substrates and base plies
- Exceptional physical properties and long-term weathering performance
- UV stabilized long lasting granule surfacing in multiple colors

TECHNICAL DESCRIPTION

TEST METHOD	PROPERTY	TYPICAL VALUE
ASTM D5147	Thickness, typical, mm (mils)	3.5 (140)
ASTM D5147	Peak Load @ 23+/-2°C (73.4+/-3.6°F), MD and XMD, min, kN/m (lbf/in.)	8.8 (50)
ASTM D5147	Elongation @ 23+/-2°C (73.4+/-3.6°F), MD and XMD, min (%)	35
ASTM D5147	Tear Strength @ 23+/-2°C (73.4+/-3.6°F), min, N (lbf)	246 (55)
ASTM D5147	Low Temperature Flexibility, max, °C (°F)	-18 (0)
ASTM D5147	Granule Embedment, max, g	2
ASTM D1970	Adhesion to Plywood @ 40°F, min, lbf/ft width	2.0
ASTM D1970	Adhesion to Plywood @ 75°F, min, lbf/ft width	12.0
ASTM D1970	Sealability around nail	pass
ASTM D1970	Waterproof integrity after low temp flexibility	pass
ASTM D1970	Waterproof integrity of lap seam	pass

AVAILABLE COLORS

Top surface granule protection is available in a variety of colors such as:

Black Buff Chestnut Grey Slate Oak
 White Red Blend Pine Green Heather Blend Weatherwood

PRODUCT DATA

Coverage (Nominal)	100 sq ft
Weight (Approx)	90 lbs
Roll Size	32'10" x 39 3/8" (10m x 1m)
Rolls/Pallet	20

APPLICABLE STANDARDS

- ASTM D 6164 Type I
- Miami Dade Code Compliance
- Factory Mutual Approved
- UL Classified for use in class A, B or C roofs, as listed the latest UL “Roofing Materials and Systems Directory”
- ICC ESR-2018
- TDI

PRODUCT WARRANTY

Polyglass USA, Inc. commercial roofing membranes can be backed with a manufacturer's warranty for up to 20 years when used as part of an approved, multi-ply roofing system. Please see your Polyglass USA, Inc. Sales or Technical Representative for specifications and details.

ELASTOFLEX® SA P

APPLICATION INSTRUCTIONS

Elastoflex SA P is intended to be used as a cap sheet for new or re-roof applications. Elastoflex SA P may be applied directly to the substrate of non-occupied spaces such as carports, sheds, canopies, etc.

- Apply only when the weather and forecast is dry and the ambient air temperature and substrate is 40°F (5°C) and rising.
- Apply over clean, dry, dust and debris-free substrates. Prime concrete decks prior to application with PG 100 Asphalt Primer.
- When re-roofing, remove all prior roofing materials down to a clean debris-free substrate and properly close-off all abandoned roof penetrations.
- Concrete or steel decks shall be designed with proper expansion devices.
- Wood decks shall have all joints blocked and properly supported.
- Ensure the installation of Elastoflex SA P does not prevent the ventilation of existing construction.
- Do not apply over shingles or any granulated surface.
- While installing Elastoflex SA P:
 1. Start at the low point of the roof.
 2. Unroll the material and allow to relax.
 3. Start by removing the first 18-24" of release film.
 4. Press the membrane into place with firm and even pressure. Roll the edges with a silicone hand roller to ensure complete adhesion.
 5. Gradually remove the remaining release film applying pressure from the center to the edges as you go.
 6. Position successive rolls providing a minimum 6" end lap and 4" side lap. Laps can be sealed for additional water tightness with a hot air welder.
 7. After installation of the entire roof surface, roll with an 80# split-face linoleum roller. Take care on sloped roofs by securing the roller and applicator with the appropriate safety equipment.
- Details and flashing may be installed using Elastoflex SA P with a hot air welder or with PG 400 Roof Cement. Check project details for proper installation requirements.

POLYGLASS U.S.A., INC. MANUFACTURING FACILITIES

- Fernley, NV
- Hazleton, PA
- Winter Haven, FL
